Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes therapeutic applications of mature FLINT (mFLINY) for use in the treatment of acute liver failure. Mature FLINT (mFLINY), which is a member of the tumour necrosis factor receptor superfamily, is used for treating acute liver failure, inflammation of the liver, abnormal hepatocyte apoptosis, sepsis, a disorder associated with inflammation, hepaticis, abnormal apoptosis, an ischaemia-associated injury or disorder such as hypercoagulation (including use with trombolytic or anti-thrombolytic agents), reperfusion-associated injury or disorder. Type I diabetees, cancer, cell damage or damage to an innocent bystander tissue that is induced by a chemotherapeutic agent or therapeutic irradiation, treating haematopoietic progenitor cells that chare been exposed to therapeutic radiation or chemotherapy, aplastic anaemia, myelodysplastic syndrome or a pancytopenic condition. mFLINT is also used for promoting the growth or differentiation of a haematopoietic progenitor coll or CD34+ cell and preventing damage to a cardiac myocyte resulting from abnormal myocardial ischaemia. The present sequence encodes a mature human FAS Ligand Inhibitory brotein (FILNT). FLINT is a homologue of tumour necrosis factor receptor proteins. FLINT inhibits the binding of FAS to FAS ligand. The mature FLINT protein is modified to produce analogues, which have greater

                                                                                                                                         inhibitory protein FLINT mature protein (see AAB19705). FLINT is a tumour necrosis factor receptor homologue that binds FAS ligand, tumour necrosis factor receptor homologue that binds FAS ligand, preventing its interaction with FAS. This interaction is implicated in runaway apoptosis and inflammatory disease. FLINT also binds to LIGHT, a membrane-bound ligand, which may play a role in immune modulation and apoptosis. The invention relates to novel FLINT analogues (see also AAB19706-09) that are resistant to proteolysis by trypsin-like proteases between positions 218 and 219 of the FLINT mature protein sequence. Nucleic acids, vectors and transformed host cells for recombinant production of the analogues are claimed. FLINT cDNA is used as a template for introducing the registrant FIINT analogues are used to prevent or treat acute lung injury, acute respiratory stress syndrome, ulcerative colitis, inhibit T lymphocyte activation, and to facilitate organ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     21-JUN-1999;

Human FLINT (also known as osteoprotegrin 3) is a new tumour necrosis factor receptor (TNPR) superfamily member, which binds Fasl and LIGHT and prevents Fasl-Fas interaction. Mature FLINT (WFLINT) inhibits Fasl-Fas mediated apoptotic and pro-inflammatory activity. WFLINT is useful for treating acute respiratory distress syndrome, treating or inhibiting inchming ischemic injury during organ transplantation or for organ preservation during transplantation. MFLINT can also be used to treat acute liver failure, inflammation of the liver, abnormal (hepatocyte) apoptosis, sepsis, disorders associated with inflammation, hepaticis, ischemia, hypercoagulation or reperfusion, damage to a cardiac myocyte resulting from abnormal myocardial ischaemia, Type I diabetes, cancer, damage to an innocent bystander tissue induced by a chemocharapeutic or therapeutic irradiation, aplastic anaemias, myelodysplastic syndromes and pancytopenic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180

CC (FLINT) CDNA. FLINT, a homologue of tumour necrosis factor receptor crotein (TNPR), binds fas ligand (Fash) and thereby preventing the interaction of Fash with fas. FLINT comprising O-linked or N-linked CC oligosaccharides is useful for preventing or treating acute lung injury (ALI), acute respiratory distress syndrome (ARDS), ulcerative colitis, correctly obstructive pulmonary disease (COPD) and pulmonary fibrosis (PF), CC to facilitate organ preservation for transplantation and to inhibit T complete activation. FLINT is useful for treating and/or preventing diseases, such as rheumatoid arthritis, fibroproliferative lung disease, (HIV), ischaemia, brain trauma/injury, human immunodeficiency virus (HIV), ischaemia, brain trauma/injury, chronic renal failure, graft-vs-host disease, cutaneous inflammation, vascular leak syndrome, thelicobacter pylori infection, goitre, atherosclerosis, insulin dependent diabetes mellitus (IDDM), osteoporosis, inflammatory bowel disease, cromer's disease, sepsis, pancreatitis, cancer, autoimmune disease such as poriasis, Down's syndrome, and multiple sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New FLINT polypeptide for treating and/or preventing acute lung injury, acute respiratory distress syndrome, ulcerative colitis, and graft-versus-host disease, comprises O-linked or N-linked oligosaccharides -
Sequence 813 BP; 122 A; 298 C; 267 G; 126 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is human mature fas ligand inhibitory protein (FLINT) cDNA. ö
treating disorders related to enhanced apoptosis (e.g. organ failure in liver, kidneys and pancreas) and inflammatory diseases associated with neutrophil activation (e.g. sepsis, acute respiratory distress syndrome, acute lung injury, systemic inflammatory response syndrome (SIRS) and multiple organ dysfunction (MODS)). The method minimises the pain mature FLINT DNA.

                                                                                                         The present invention describes therapeutic applications of mature FLINT (C (mFLINT)) for use in the treatment of acute liver failure. Mature FLINT (mFLINT), which is a member of the tumour necrosis factor receptor. Superfamily, is used for treating acute liver failure, inflammation of the liver, abnormal hepatocyte apoptosis, sepsis, a disorder associated with inflammation, hepatitis, abnormal apoptosis, an ischaemia-associated injury or disorder such as hypercoagulation (including use with thrombolytic or anti-thrombolytic agents), reperfusion-associated injury or disorder. Type I diabetes, cancer, cell damage or damage to an including use with that is induced by a chemotherapeutic agent or therapeutic irradiation, treating haematopoietic progenitor cells that the late been exposed to therapeutic radiation or chemotherapy, aplastic also used for promoting the growth or differentiation of a haematopoietic progenitor cell or CD34+ cell and preventing damage to a cardiac myocyte resulting from abnormal myocardial ischaemia. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is the coding sequence of the human Fas ligand inhibitor (FLINT). The FLINT protein is involved in cell-specific apoptosis, and can be used to treat inflammatory and autoimmune diseases such as rheumatoid arthritis, inflammatory bowel disease, funding a triffercious diseases, diabetes, psoriasis and Graves' disease, confectious diseases such as HIV-induced lymphopenia, funding the paparitis B/C chronic hepatitis and cirrhosis, and H. pylori-associated ulceration, ischaemia and reperfusion conditions including acute and atherosclerosis, and Alzheimer's and parkinson's diseases, brain trauma and injury, chronic glomerulomephritis, osteoporosis, aplastic anaemia, myelodysplasia, ulcerative colitis, bown's syndrome, and multiple sclerosis. In addition, the gene and protein can be used to prevent apoptosis following organ transplantation.

Mature FLINT (mFLINT) inhibits Fasi-Fas mediated apoptotic and pro-inflammatory activity. mFLINT is useful for treating acute respiratory distress syndrome, treating or inhibiting ulcreative colitis, inhibiting ischemic injury during organ inhibiting transplantation or for organ preservation during transplantation. mFLINT can also be used to treat acute liver failure, inflammation of the liver, abnormal (hepatocyte) apoptosis, sepsis, disorders associated with inflammation, hepatitis, ischemia, hypercoagulation or reperfusion, damage to a cardiac myocyte resulting from abnormal myocardial ischaemia, Type I diabetes, cancer, damage to an innocent bystander tissue induced by a chemotherapeutic or therapeutic irradiation, aplastic anaemias, myelodysplastic syndromes and pancytopenic conditions.

                                                    This DNA encodes a HUMAN NTR-1 polypeptide, a novel orphan receptor. The protein is related to osteoprotegerin (OPG) and to tumour necrosis factor receptor (TNFR). Host cells transformed with a vector comprising the HUMAN NTR-1 nucleic acid are used for the recombinant expression of the protein. HUMAN NTR-1 proteins and antibodies immuno specific for the protein are useful for diagnosis and treatment of humans and animals, especially muscle disorders, as receptor is involved in regulation of bone mass and muscle metabolism. HUMAN NTR-1 receptors are also useful for screening for novel binding agents, and cognate ligands, which may be used to treat disorders associated with HUMAN NTR-1 imbalance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        HUMAN NTR-1; orphan receptor; osteoprotegerin; OPG; TNFR; human; tumour necrosis factor receptor; muscle disorder; bone mass; scr muscle metabolism; binding agent; cognate ligand; ss.

The present sequence encodes the tumour necrosis factor (TNF) receptor polypeptide NTR3. The NTR3 polynucleotides and polypeptides are useful for treating diseases such as acquired-immunodeficiency syndrome (AIDS), anemia, autoimmune diseases, cachexia, cancer, cerebral malaria, disbetes mellitus, disseminated intravascular coagulopathy, erythroid sick syndrome, haemorrhagic shock, hepatitis, insulin resistance, leprosy, leukaemia, meningitis, multiple sclerosis, myocardial ischaemia, obesity, rejection of transplanted organs, rheumatoid arthritis, septic shock syndrome, stroke, adult respiratory distress syndrome (ARDS), tuberculosis, and a number of viral diseases. The NTR3 polypeptide is useful for identifying or developing new (ant) agonists of NTR3. It may be used as an immunogen to which antibodies may be raised. NTR3 uncleic acid molecules may be useful as hybridisation probes in diagnostic assays to test, either qualitatively or quanticatively, for the presence of an NTR3. DNA or corresponding RNA in mammalian tissue or bodily fluid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The M68 protein is a member of a family of proteins which have croles in immune responses, cell death, cell proliferation and stimulation of cell differentiation. M68 lacks a transmembrane domain and is a secreted factor suggesting that it functions as a natural conhibitor for its ligand. The altered expression pattern of M68 in a multitude of tissues suggests that M68 may play a role in cancer by binding to its ligand and blocking apoptotic cell death induced by such a ligand. This anti-apoptopic role of M68 suggests that modulators of M68 will be useful in treatment of apoptosis-related diseases such as various forms of cancer and various bone disorders. M68 nucleic acids and proteins are therefore useful for treating conditions involving atypical apoptosis and for identifying modulators of M68. Modulators of M68 are useful for treatment of cancer and other diseases associated with abnormal levels of apoptosis including systemic lupus erythematosus, Hashimoto's thyroiditis, Grave's disease, idiopathic myxodema, autoimmune cliver diseases, autoimmune gastritis, ulcerative colitis, glomerulonephiritis, pulmonary fibrosis, heart failure,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated human M68 nucleic acids and proteins which are part of the tumor necrosis factor receptor (TNFR) family, useful for identifying modulators that may be used to treat various diseases e.g. cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 21;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents the human tumour necrosis factor receptor-6 alpha (TNFR-6 alpha) cDNA. The invention also provides for the TNFR-6 beta cDNA (AAV39086). TNFR-6 alpha and TNFR-6 beta are members of the tumour necrosis factor receptor (TNFR) family. TNFRs are expressed in endothelial cells, keratinocytes, normal prostate and prostate tumour tissue. For a number of disorders of these cells,

particularly of the immune system, substantially altered (whether increased or decreased) levels of TNFR-6 alpha and/or TNFR-6 beta gene expression can be detected, therefore the TNFR-6 alpha and TNFR-6 beta polypeptides, nucleic acids and antibodies are claimed to be useful in the diagnosis of such disorders. Mutations of the TNFR-6 alpha and TNFR-6 beta genes can also be detected. The TNFR polypeptides are also claimed to be useful for identifying ligands which may be useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 099

                                          disorders associated with neovascularisation (especially ocular neovascularisation) (such as solid tumours and malignancies (e.g. prostate cancer, breast cancer and colon cancer), diabetic retinopathy and pre-maturity macular degeneration), allergies, inflammation, thyroid associated opthalmopathy tissue/cell damage, wounds, microbial and parasitic infections, bone disease (e.g. osteoporosis), atherosclerosis, pain, cardiovascular disease (e.g. stroke), neurodegenerative disorders (e.g. Alzheimer's disease), immune disorders (e.g. graft rejection), rheumatism, liver disease, autoimmune diabetes, asthma, psoriasis, septic shock and ulcerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; Tumour necrosis factor receptor 6; TNFR-6alpha; TNFR-6beta; ocular neovascularisation; solid tumour; malignancy; prostate cancer; breast cancer; colon cancer; diabetic retinopathy; microbial infection; pre-maturity macular degeneration; allergy; inflammation; tissue damage; pre-maturity macular degeneration; cell damage; parasitic infection; thyroid associated opthalmopathy; cell damage; parasitic infection; bone disease; osteoporosis; atherosclerosis; cardiovascular disease; neurodegenerative disorder; Alzheimer's disease; immune disorder; graft rejection; rheumatism; liver disease; autoimmune diabetes; asthma;
                                                                                                                                                                                               alpha (TNFR-6alpha) of the invention. The TNFR-6alpha and TNFR-6beta DNA and protein sequences can be used in the prevention, treatment and diagnosis of diseases associated with inappropriate TNFR expression. The nucleic acids, polypeptides, antibodies, agonists and antagonists against them may be used for the treatment of a range of conditions such as
                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding human tumour necrosis factor receptor proteins TNFR-6alpha and TNFR-6beta, useful for treating e.g. Alzheimer's disease, osteoporosis and graft rejection -
                                                                                                                                                                                                                                                                                                                                                                                                                         WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   04-MAR-1999;
